

Apochromatic Loupes

A special optical lens construction - described as "apochromatic lens" (gr. = free of colors) - provides a clear view without any color influences and spheric aberrations.

As advantage of such an apochromatic loupe system you will find optimal image quality versus conventional galilean loupes:

perfect optical quality; bright, clear images without any color influences and diffuse areas at the lens borders;

large focal length; sharp, brilliant images, even if you move your head slightly;

stress-arm work, because of the perfect recognition of all details and the light weight of the loupe system

Quality & Flexibility:

<http://surgical-loupe.com> | +49 1805 64 77 67

Features:

- Framework 100% pure Titanium, uncoated
- optional prescription lenses
- optional removable protection shield
- Nose pads adjustable
- flexible PD of the loupe unit
- **Options:** LED Head Light & CCD Camera

Function:

- without loupes usable as protection glasses
- Loupes for use without correction lenses
- Loupes for use including correction lenses

Ergonomics:

- perfect fitting, flexible earpieces
- light weight; ca. 69 grams only
- well balanced system

Loupes:

- Apochromatic 2.5x
- Apochromatic 3.5x
- Working Distances: 340 / 450 / 500 mm
